**See-LEVEL**

## Testimonials

---

### How the data was collected

The testimonials presented below are all from people who experienced seasickness and used See-LEVEL for relief. We have actively asked customers and volunteers for their experiences.

All feedback presented in this document was verified by either an observer onboard (in the case of sea trials) or professionals who witnessed their recovery (commonly, ships medical officers). There are several testimonials included by satisfied clients who have purchased See-LEVEL for their own private or corporate vessels.

See-Level Ltd has conducted many trials and evaluations over the last 36 months and collected a large amount of data from many vessels operating in different parts of the world.

Any negative or neutral feedback has been analyzed in order to understand why See-LEVEL did not work in that particular situation. The trends in situations where See-LEVEL has been less effective appear to be largely related to the sufferer's state of mind. We believe that investigation into the *psychological* conditions associated with seasickness is necessary and has not yet been addressed by published research. (The *physiological* effects of the body when falling ill or under recovery are much better documented).

### Testimonial wording

We have kept the testimonials as original as possible so some allowance should be made for idiosyncratic language and grammar.

**Name:** Dr Janet McCraw  
**Details:** Western  
**Profession:** Ships Medical Officer  
**Applied:** Early  
**Relief time:** 20  
**Outcome:** Positive  
**Vessel & Trip** 75m Ice breaker, Heritage Expeditions, 1500 NM offshore 10-day voyage. New Zealand to Antarctica

“It worked and they went away happy, they had more time to train the mind for sea sickness, and they can do this while on the boat. I think it’s a practical option for passengers especially those who also love gadgets and shows the company’s technology advanced position. Passengers don’t want to use medicine in general”

**Name:** Margaret Pickering  
**Details:** Western  
**Profession:** Trial Volunteer  
**Applied:** Early  
**Relief time:** 10  
**Outcome:** Positive  
**Vessel & Trip** 30ft Sailing Yacht A 3-hour trip in seasick prone waters of the Lyttelton Heads, New Zealand.

‘Within a few minutes with the headset on symptoms dissipated by about 80% and after a few more minutes I could enjoy the movement without the headset and the anxiety of getting worse went away’

**Name:** Captain C Coleman  
**Details:** Western  
**Profession:** Marine Pilot  
**Applied:** Early  
**Relief time:** 15  
**Outcome:** Positive  
**Vessel & Trip** 18 Pilot Vessel The pilot boat operates in harsh conditions in the South Island of New Zealand. Many trips are at night in difficult conditions

I gave See-LEVEL to my manager while in a large swell on board the pilot vessel inspecting pilotage buoys. He became unwell and See-LEVEL provided a non-medical instant relief - and he was very pleased he did not vomit

**Name:** Michael Baker  
**Details:** Western  
**Profession:** Trial Volunteer  
**Applied:** Early  
**Relief time:** 15  
**Outcome:** Positive  
**Vessel & Trip** 6.5m Power boat An eight-week trial undertaken with volunteers in seasick conditions with biometrics attached and data recorded

“I was given a headset with See-LEVEL and after listening to the instructions on how to help and deal with seasickness I placed the headset on. After 15 minutes of using the headset on it was like I had never known been seasick or lightheaded at all. I was informed my pulse went down to 90bpm from 119 bpm, and I felt calm and relaxed.”

**Name:** Valda Smith 'I always get seasick on small vessels and after using See-Level I felt really calm and had no more nausea.  
**Details:** Western  
**Profession:** Trial Volunteer  
**Applied:** Early  
**Relief time:** 15  
**Outcome:** Positive  
**Vessel & Trip** 30ft Sailing Yacht A 3-hour trip in seasick prone waters of the Lyttelton Heads, New Zealand.

**Name:** Courtney Fletcher "I felt grounded" came the response with a big beam on her face.' If only I could have had this earlier, I would have definitely got one to use for my cruise' Note: Courtney was breast feeding her 1-month-old baby and could not take medication.

**Vessel & Trip** 6.5m Power boat  
My experience with sea level and the crew was an amazing insight on sea sickness which I struggle with quite badly and how to help with the feeling of been sick on the seas. Within a couple of minutes, I started to feel lightheaded and had a pulse of 129 bpm, so I was given a headset with See-LEVEL and after listening to the instructions on how to help and deal with seasickness after 15 mins of using the headset it was like I had never known been sick or lightheaded at all. My pulse went down to 119 bpm, and I felt calm and relaxed. Overall, I would highly recommend this to people who suffer from seasickness and would like to spend more time on the sea. Thank you to the friendly and helpful staff.  
An eight-week trial undertaken with volunteers in seasick conditions with biometrics attached and data recorded

**Name:** Jessica Rose

**Name:** Passenger #1 Thank you, that helped a lot" (limited English) - Observer: This passenger started feeling ill once the vessel came to rest after a 20-minute sprint. She remained in the vessel and looked withdrawn. She asked to use See-LEVEL and applied our headset which she continued to use for approximately 20 minutes. When the vessel started to move again, she removed the headset. The vessel stopped again, and she proceeded outside for dolphin watching.

<b>Name:</b>	<b>Passenger #7</b>	We interrupted the person and they vomited Observer: This passenger was defiantly being brain trained and preventing sea sickness, but the interruption broke the training. Therefore, If the passenger seems well enough leave them to decide when to remove See-Level don't interrupt them, again we should have this written into our procedure, if someone is wearing the see- level headset then please don't interrupt them.
